# Exercise 2.2
# Responsive Layout with Grid Template Areas

## Objective

Your job is to create a layout where the content of your page is logically rearranged depending on the size of the browser window to provide the best user experience.
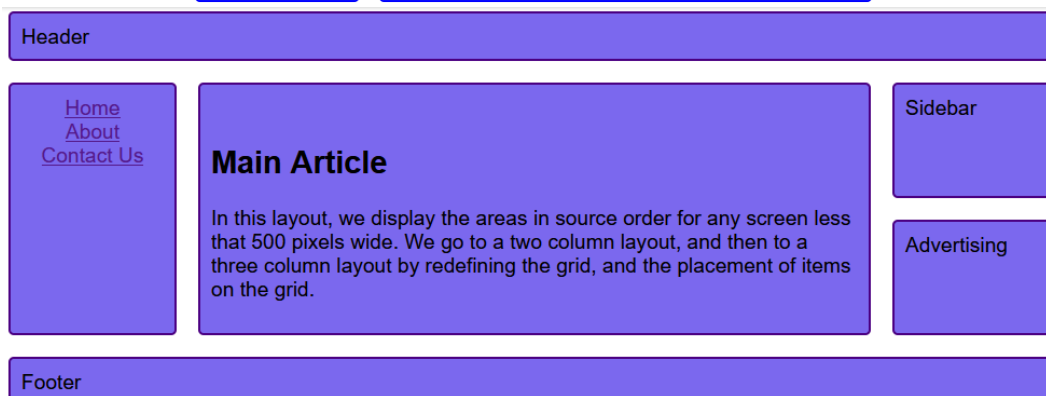

## Layouts

When the browser window is **less than 500px** wide, the layout should like this.

When the browser window is **greater than or equal to 500px** wide, the layout should like this.

When the browser window is **greater than or equal to 900px** wide, the layout should like this.

## Pro Tips

- Design **mobile-first**.
  - This means that the green layout should be your default CSS. When the browser window grows to be 500px wide, that's when your first media query should fire.
- You should have 3 different instances of the **grid-template-areas** property in your CSS for the 3 different layouts.
  - One will be the default and the other 2 will go in their own separate media queries.
  - Only define your **grid-area** properties **once**.
- When in doubt, consult the Complete Guide to CSS Grid!

## Submission

1. Remove this instruction file from the exercise folder.
2. Zip up the exercise folder which should contain only *index.html* and *style.css*.
3. Rename the zip file *2.2-Responsive-Layout-FIRSTNAME-LASTNAME.zip*
4. Submit on Moodle.
